the largest  
tape restoration  
in history**

## Media Restoration

*Backup tapes and optical disks remain the predominant form of off-line storage for critical business information. Efficient restoration of these formats is essential to companies confronting litigation, compliance and risk management issues.*

### Experience Matters

In 1987, National Data Conversion was founded as a data conversion company. Since its inception, NDC has restored data from hundreds of thousands of backup tapes, optical platters, cartridges and floppy disks. NDC stands alone as the industry leader in our ability to execute restoration of all formats.

Our drive for excellence and innovation continues every day. We have built our reputation by blending our experience in handling all media types, with the development of innovative tools and techniques, to restore all backup formats in the most scalable and efficient manner.

### Size Is Important.

Our enormous processing capacity allows us to meet the requirements of the biggest jobs and tightest deadlines. In fact, that is why NDC was entrusted with the largest tape restoration project in history — over 65,000 tapes. Time after time, we deliver on our promises and exceed our customers' expectations.
